

## Five Schools that participate in this project:

- Sirius Academy West (The United Kingdom)
- Escola Secundaria Campos de Melo (Portugal)
- I.E.S. La Cala de Mijas (Spain)
- R.-K.Sg. Canisius (Netherlands)
- Engineering Lyceum of Vilnius Gediminas Technical university (Lithuania)

2017 – 2019

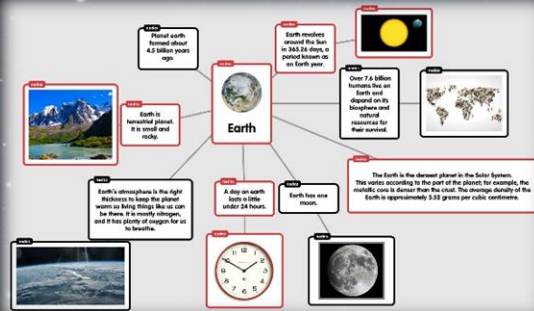

“Where there is unity  
there is always  
victory”

Publilius Syrus

# UNIVERSE

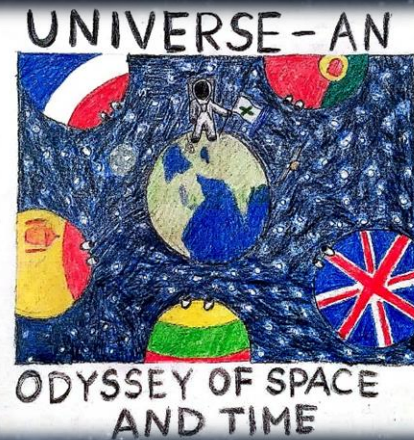

The goal of this project is to increase the students interest In space and develop leadership by cultivating innovation culture in Europe to present the latest technologies and with their help to create engineering gadgets, to promote the international cultural communication among different educational institutions, as well to provide the opportunity for students and teachers to improve English skills.

The project will promote greater interest in STEAM subjects and increase in students' skills and competences of these subjects. Communication will help students to acquire the main skills and competences which are necessary for personal growth aiming at becoming active European citizens.

Communication among different countries will help to improve the quality of education and raise the level of motivation of students, teachers, school and parents. While communicating with EU countries we will aim for strategical partnership, close communications and cooperation.

The project will have a significant impact on the strategical development of institutions at an international level, will raise multicultural awareness and will influence the improvement of curriculum. As a consequence, it will have an effect on the students' mathematical literacy as well as the quality of education.
